PB ElectroTools

Dear Reader

Tools you can rely on - Nowhere is this PB Baumann slogan more important than when working on live parts. That is why the PB Newsletter is devoted to the theme of "insulated tools".

PB ElectroTools, the new quality products from PB Baumann. The successful worldwide sale of the new SwissGrip screwdriver and the continuing popularity of the tried-and-tested PB 100 screwdriver have persuaded us to combine the advantages of these two product lines. We are delighted to be able to present the new screwdriver range for electrical work.

We have utilised the latest technical knowledge and called on our decades of experience to improve the safety and protection of users. Naturally, PB ElectroTools meet the requirements of international standard EN 60900:1993. They are VDE-tested and carry the VDE mark.

We firmly believe that customer satisfaction depends on the quality of the tools. We are responding to this challenge by pushing our performance and innovative capacity to the limit in order to manufacture PB quality tools at competitive prices and in an environmentally compatible way.

Marc Blunier
Manager marketing and distribution

The new, perfect handle for the electrical industry: the popular slender shape of PB electrician handles, combined with the pleasing feel of the PB SwissGrip.

Every single one is tested for dielectric strength at 10,000 volts in a bath of water. Other stringent tests in the case of all ranges guarantee tools that are safe for working up to 1,000 V.

All tips are manufactured to well-known PB quality standards, with the highest possible uniformity of hardness and dimensional accuracy.

The soft component encases the entire handle, therefore guaranteeing the best possible contact between the hand and the pleasant-feeling, handy surface.

Fast identification thanks to the moulded screw symbols in the end of the handle and the added colour coding. The size is also visible at all times in the inscription.

Safety instructions

Pay attention to voltage

The insulated screwdrivers comply with the regulations laid down in IEC 60 900 for insulated tools used at voltages up to 1000 V AC/1500 V DC. However, this should not be regarded as an encouragement to carry out tasks on live appliances.

We expressly refuse any liability for any injury or damage resulting from incorrect use of **screwdrivers**, such as levering, scratching, chiselling etc.
